Spot·ON®
Technology

Hatco's new Intelligent Toast-Qwick ITQ Series Toasters set new standards in flexibility, ease of use and high productivity - with consistent results through programmable automation and energy efficiency.

Up to eighteen product settings can be stored for instant recall at the touch of a button, changing quickly from white to wholemeal bread toast, to bagels, croissants, crumpets, fruit loaf etc, even consistently melting cheese and finishing smaller food products.
This breakthrough technology can easily replace several toasting platforms in the one easy-to-use unit, with automated functions for absolute consistency.
Hatco's patented *ColourGuard* sensing system monitors and maintains product colour by adjusting cook time and temperature - for perfect results everytime.
Energy efficiency and time savings along with less wastage makes this unit the obvious choice for intensive kitchen production.

The conveyor(s) have four unique production modes:
▸ **Continuous** ▸ **Single product toast/deliver** ▸ **In-and-out** ▸ **In-Pause/Cook- deliver continuously.**
▸ *Spot-On* technology senses the product on the conveyor for automatic operation
▸ Eighteen product settings can be stored and retrieved using the control panel
▸ USB port for easy program changes and retrieving product usage data.
